

Springside C.P School, Bury

H.H. Smith & Sons Co Ltd

The Brief

A large traditional extension was required to accommodate the new Sure Start Unit within Springside Primary School. Internal adaptations were undertaken and a new boiler plant room to service the whole site was installed. Extensive external works were also required as part of the project.

Key Points

Temporary classrooms were required on site to house the children whilst work progressed.

Challenges

The site was occupied throughout the build, with limited available space for storage and handling. Restricted space resulted in minimal car parking for both site and teaching staff which required collaboration and consideration throughout the project.
